

Factsheet

Tagging Components in versiondog

The screenshot displays the VersionDog software interface. A 'Manage tags' dialog box is open, showing a list of tags and their details. The 'Server version' overview table is also visible, showing a list of versions and their associated tags.

Manage tags dialog box:

- Buttons: Add, Remove, Manage
- Filter: safety QG - Versions 9 [Approved 05/2016]
- Tag: Improvement Jan 2017
- Name: Improvement Jan 2017
- Comment: Increased stability and transportation speed
- Last modified by: VersionDog [Super administrator]
- Last modified on: 15.05.2017 10:24
- Version overview (3):

Name	Directory	Version	Timestamp (local)
Safety QG	[SmartShop\Floor\Documentation\Appro...	9 [Approved 05/2016]	30.05.2016 11:17
FU 1.A1	[SmartShop\Floor\Assembly\Quality Gate 1	1	07.03.2016 09:54
Conveyor 1.A1.1	[SmartShop\Floor\Assembly\Quality Gate 1	2	27.07.2015 10:49

Server version overview table:

Version	Tags	Timestamp (local)	Username	Change reason (global)	Comment (global)
10		03.06.2016 14:37:56	VersionDog [Super a...	Minor Adjustment

versiondog – For more Efficient Production

versiondog is the leading version control and data management software solution for automated production. It makes tracking changes and safeguarding data significantly more efficient.

versiondog brings order and clarity where project data needs to be continually changed and made available from a central source. The increased safety, security, and certainty provided by this software system quickly results in measurably increased productivity. versiondog makes it easy for you to optimize the interplay between all your different types of robots, controllers, field devices, drives, programming languages, file formats, and software applications.

This data management system gives you ultimate data traceability, minimizing your risks and costs, and saving you time and effort.

Tagging Components in versiondog

In the computer world, the word tag is used for a label that is assigned to an item (usually a file or folder). Tags can be used to group, categorize or add notes to items.

In versiondog, tags are used to group multiple components together. They can be added to versions or components at any time. Below, you will find a small introduction on how tags are used in versiondog:

- Each tag has its own unique name. This name summarizes the tag's function and is displayed in both the "Change history" and "Component overview". Tag names are used to search for, sort, and filter tags.
- In the dialogue "Manage tags" you can enter a "tag comment". The tag comment describes the purpose of the tag.
- The dialogue "Manage tags" automatically displays the date on which the tag was last modified and the user who made the last modification. This means that the user can easily find out if any unknown changes were made to the tag, who made them, and when.
- The "Version overview" displays a list of versions of different components, the "Timestamp (local)", and the "Change reason (global)".

Tagging is available in the UserClient via:

- The "Edit" tab of the ribbon
- Right-click context menu in the component tree or in the component details

versiondog Tagging

You can use versiondog "tagging" function to execute the following tasks:

- Assign a common name to versions of different components so that they can be grouped together as a single release version. For example, you can use the tagging function to group together HMI projects with corresponding PLC projects, programs for robots, and all documentation as a single release version.
- Simplify the process of navigating to a version from a multitude of components. You can do this by opening the "Manage tags" dialogue.
- Protect versions of different components by assigning a tag to them. Versions that are tagged cannot be deleted from the server or moved. If you want to delete or move a version to which you have assigned a tag, you must first remove the tag.
- Export tags to a CSV file. This allows you to generate reports, evaluations, and check lists (i.e. with Microsoft Excel).

Image 2: Overview of the dialogue "Manage tags"

Image 3: How tags appear in the UserClient "Change history"

Note: versiondog tagging function is available from versiondog 5.0 onwards.

Features and Functions

Create and add tags to versions of different components	✓
Search for, filter, edit, delete, and export tags in the "Manage tags" dialogue	✓
Copy all versions to a local directory	✓
Access rights considered when configuring and using tags	✓
Export tag to a CSV file	✓
Tutorial in versiondog Info	✓

System Requirements
