

Factsheet

versiondog BackupClient

versiondog – For more Efficient Production

versiondog is the leading version control and data management software solution for automated production. It makes tracking changes and safeguarding data significantly more efficient.

versiondog brings order and clarity where project data needs to be continually changed and made available from a central source. The increased safety, security and certainty provided by this software system quickly results in measurably increased productivity. versiondog makes it easy for you to optimize the interplay between all your different types of robots, controllers, field devices, drives, programming languages, file formats and software applications.

This data management system gives you ultimate data traceability, minimizing your risks and costs, and saving you time and effort.

versiondog BackupClient

The versiondog system consists of a number of applications, one of which is the BackupClient. This application is used when backups need to be made of the logic programs of devices that for one reason or another (e.g. security) are not networked.

What distinguishes the BackupClient from other versiondog applications is the fact that data is transferred via a cable connection with the device. A portable PC (usually a laptop) with the BackupClient installed is synchronized with the versiondog server and receives the scheduled backup jobs.

A member of staff then physically takes the PC to the production area. The PC is connected to the automation device and the backup is carried out. When all the required backups have been done, the PC is re-connected to the network and the BackupClient is synchronized again with the versiondog server, transferring the backup data in the process.

versiondog BackupClient Scenario

Features and Functions

Included in standard setup	✓
Back up non-networked devices	✓
Synchronization of backup jobs and job results between BackupClient and Server	✓
Job execution log	✓
Synchronization log	✓
Tutorial available in versiondog INFO	✓

System Requirements
