

# versiondog Agents

## Decentralization of Upload and Compare Functionality

Delegates upload and compare functions to other systems for better performance and more flexibility

- **CROSS-NETWORK UPLOAD**
- **LOAD BALANCING**
- **REMOTE COMPARISONS**

### What does it do?

- Enables load balancing by executing upload or compare on other systems
- Enables you to perform a remote compare without a local editor
- Can be used to perform a cross-network Upload
- Can be used to execute an online backup of WinCC runtime during operation

### What are the benefits?

- Reduced manual work when creating and managing backups
- Easy to install and easy to use
- Increased performance of server systems by reducing their workload
- Customized comparison and upload solutions
- Can be used for load balancing of uploads and compares
- Reduced license costs because comparisons can be carried out on already existing systems

### What are the requirements?

- Active versiondog server license
- versiondog Upload & Compare Agents Add-On
